**Amendments to the Claims:**

By the following amendments, claims 1, 11, 12, 45, and 55 have been amended. This listing of claims replaces all prior versions, and listing, of claims in the application.

**Listing of Claims:**

Claim 1. (Currently Amended) A high aspect ratio antimicrobial additive comprising i) an inorganic antimicrobial agent in particle form ~~[[and]]~~ comprising one or more antimicrobial metals or metal ions dispersed in ii) a water absorbing, water vapor absorbing and wetttable hydrophilic polymer having a water absorption at equilibrium of at least about 5% by weight,

said high aspect ratio antimicrobial additive being in the form of ~~[[a microparticle]]~~ discrete microparticles whose longest dimension is from about 5 microns to about 500 microns and whose aspect ratio is greater than about 2.

Claim 2. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the antimicrobial metal or metal ion is selected from the group consisting of silver, copper, zinc, tin, gold, mercury, lead, iron, cobalt, nickel, manganese, arsenic, antimony, bismuth, barium, cadmium, chromium, thallium and combinations thereof.

Claim 3. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the antimicrobial metal or metal ion is silver, zinc, copper or a combination of any two or all three of the foregoing.

Claim 4. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the antimicrobial agent is selected from the group consisting of metal salts, metal oxides, antimicrobial water soluble glasses, antimicrobial metal ion-exchange agents and combinations thereof.

USSN 10/032,370

Claim 5. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the antimicrobial agent is an antimicrobial metal ion-exchange agent comprising a ceramic carrier having ion-exchanged antimicrobial metal ions.

Claim 6. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 5 wherein the ceramic carrier is selected from the group consisting of zeolites, hydroxyapatites and zirconium phosphates.

Claim 7. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 6 wherein the ceramic carrier is a zeolite and the antimicrobial metal ions are silver ions, alone or in combination with zinc ions or copper ions or both.

Claims 8 and 9 (Cancelled)

Claim 10. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the hydrophilic polymer is a polymer with water absorption at equilibrium of at least about 20% by weight.

Claim 11. (Currently Amended) The high aspect ratio antimicrobial additive according to claim 10 wherein the hydrophilic polymer is chosen from polyhydroxyethyl methacrylate, polyacrylamide, N-vinyl-2-pyrrolidinone, polysaccharides, polylactic acid, polyamide and hydrophilic polyurethane.

Claim 12. (Currently Amended) The high aspect ratio antimicrobial additive according to claim 11 wherein the hydrophilic polymer is hydrophilic polyurethane.

Claim 13. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 comprising from about 1 to about 1000 parts by weight of the inorganic antimicrobial agent based upon 100 parts by weight of the hydrophilic polymer.

USSN 10/032,370

Claim 14. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 13 comprising from about 10 to about 200 parts by weight of the inorganic antimicrobial agent based upon 100 parts by weight of the hydrophilic polymer.

Claim 15. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 14 comprising from about 20 to about 100 parts by weight of the inorganic antimicrobial agent based upon 100 parts by weight of the hydrophilic polymer.

Claim 16. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 further comprising an inorganic discoloration inhibiting agent.

Claim 17. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 16 wherein said discoloration inhibiting agent is an ammonium compound.

Claim 18. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 16 wherein the antimicrobial agent comprises an antimicrobial metal ion-exchange agent and said inorganic discoloration agent comprises ion-exchanged ammonium ions contained within said antimicrobial agent.

Claim 19. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 5 further comprising a dopant agent.

Claim 20. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 19 wherein said dopant is an inorganic sodium salt.

Claim 21. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 20 wherein said dopant is sodium nitrate.

Claim 22. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the microparticles contain multiple particles of one or more inorganic antimicrobial agents.

USSN 10/032,370

Claims 23 – 32 (Cancelled)

Claim 33. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the aspect ratio is from about 4 to about 100.

Claim 34. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the aspect ratio is from about 5 to about 30.

Claims 35-44 (Cancelled)

Claim 45. (Currently Amended) A method of altering the release characteristics of an inorganic antimicrobial agent from a polymer matrix, said method comprising incorporating a high aspect ratio hydrophilic antimicrobial additive into said polymer matrix, wherein [[the]] said high aspect ratio hydrophilic antimicrobial additive comprises i) the inorganic antimicrobial agent in particle form dispersed in ii) a water absorbing, water vapor absorbing and wettable hydrophilic polymer having a water absorption at equilibrium of at least about 5% by weight; said high aspect ratio hydrophilic antimicrobial additive being in the form of microparticles whose longest dimension is from about 5 microns to about 500 microns and whose aspect ratio is greater than about 2; wherein the water absorption characteristics of the hydrophilic polymer of the antimicrobial additive is different from that of the matrix polymer.

Claim 46-47. (Cancelled)

Claim 48. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the longest dimension is from about 10 microns to about 500 microns.

Claim 49. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 1 wherein the longest dimension is from about 20 microns to about 100 microns.

USSN 10/032,370

Claim 50. (Previously Presented) The method according to claim 45 wherein the high aspect ratio is from about 4 to about 100.

Claim 51. (Previously Presented) The method according to claim 45 wherein the high aspect ratio is from about 5 to about 30.

Claim 52. (Cancelled)

Claim 53. (Previously Presented) The method according to claim 45 wherein the longest dimension is from about 10 microns to about 500 microns.

Claim 54. (Previously Presented) The method according to claim 45 wherein the longest dimension is from about 20 microns to about 100 microns.

Claim 55. (Currently Amended) A high aspect ratio antimicrobial additive comprising i) from about 1 to about 1000 parts by weight of an inorganic antimicrobial agent in particle form dispersed in ii) 100 parts by weight of a water absorbing, water vapor absorbing and wettable hydrophilic polymer, said water absorbing, water vapor absorbing and wettable hydrophilic polymer having a water absorption at equilibrium of at least about 5% by weight; [[and]] said high aspect ratio antimicrobial additive being in the form of discrete microparticles [[a microparticle]] whose longest dimension is from about 5 to about 500 microns and whose aspect ratio is greater than 2.

Claim 56. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 55 wherein the aspect ratio is from about 4 to about 100.

Claim 57. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 55 wherein the aspect ratio is from about 5 to about 30.

USSN 10/032,370

Claim 58. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 55 comprising from about 10 to about 200 parts by weight of the antimicrobial agent based upon 100 parts by weight of the hydrophilic polymer.

Claim 59. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 55 comprising from about 20 to about 100 parts by weight of the antimicrobial agent based upon 100 parts by weight of the hydrophilic polymer.

Claim 60. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 55 wherein the antimicrobial agent is an antimicrobial metal ion-exchange agent comprising a ceramic carrier having ion-exchanged antimicrobial metal ions.

Claim 61. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 60 wherein the ceramic carrier is selected from the group consisting of zeolites, hydroxyapatites and zirconium phosphates.

Claim 62. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 60 wherein the ceramic carrier is a zeolite and the antimicrobial metal ions are silver ions, alone or in combination with zinc ions or copper ions or both.

Claim 63. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 5 wherein the antimicrobial metal ions are silver ions, alone or in combination with zinc ions or copper ions or both.

Claim 63. (Previously Presented) The high aspect ratio antimicrobial additive according to claim 60 wherein the antimicrobial metal ions are silver ions, alone or in combination with zinc ions or copper ions or both.
